Carrier Overview

Dr. Dusanka Zupanski joined Colorado State University, Cooperative Institute for Research in the Atmosphere in 2001. Prior to that Dr. Zupanski held positions at the NOAA/National Centers for Environmental Prediction (NCEP), where she worked on developing variational data assimilation techniques. Dr Zupanski's current research focus is on ensemble data assimilation techniques and their applications to different areas in geosciences. Major research topics include model error and parameter estimation, information content analysis of data, and covariance localization.
